Industrial Pure Air

High Purity Compressed Cylinder Gas 4n Sihcl3 Trichlorosilane

Basic Information

- Place of Origin:
- Brand Name: CMC
- Certification:
- Model Number:
- Minimum Order Quantity: 1kg
- Price: US \$500/kg
- Packaging Details:
- Delivery Time: 15 days
- Payment Terms: L/C, T/T
- Supply Ability:

Product Specification

- Product Name:
- Transport:Model No.:
- Purity:
- Orign:

- Origin:
- HS Code:
- Supply Ability:
- CAS No.:
- Formula: Sihcl3
- EINECS:
- Constituent:

Product Description

Product Description

Trichlorosilane is a chemical compound composed of one silicon atom bonded to three chlorine atoms and one hydrogen atom. It is a colorless, volatile liquid with a pungent odor. Here are some key points about trichlorosilane:

Chemical Composition: Trichlorosilane consists of one silicon (Si) atom bonded to three chlorine (Cl) atoms and one hydrogen (H) atom. Its chemical formula is HSiCl3.

Properties: Trichlorosilane is a volatile liquid that boils at around 31.8 degrees Celsius (89.2 degrees Fahrenheit) and has a melting point of -68 degrees Celsius (-90.4 degrees Fahrenheit). It has a strong, irritating odor and is highly reactive.

Production: Trichlorosilane is primarily produced through the reaction of metallurgical-grade silicon (obtained from the reduction of silicon dioxide) with hydrogen chloride (HCl) gas:

Si + 3HCl → HSiCl3 + H2

This reaction typically occurs at high temperatures in the presence of a catalyst, such as copper.

Uses: Trichlorosilane has various industrial applications, particularly in the production of silicon-based materials:

Silicon Production: It is a key precursor in the production of polycrystalline silicon, which is widely used in the manufacturing of solar cells,

semiconductors, and electronic devices. Trichlorosilane is decomposed at high temperatures to produce silicon.

Chemical Synthesis: Trichlorosilane is used as a starting material or intermediate in the synthesis of various silicon compounds, such as silicones, silanes, and silicon carbide.

Safety Considerations: Trichlorosilane is a hazardous substance and should be handled with caution. It is flammable and can form explosive mixtures with air. Trichlorosilane is also toxic and can cause severe burns upon contact with the skin or eyes. Inhalation of its vapors or fumes can be harmful to the respiratory system. Appropriate safety precautions, such as the use of protective equipment and proper ventilation, should be followed when working with trichlorosilane.

It's important to handle trichlorosilane with care and adhere to safety measures to mitigate potential risks associated with its reactivity and toxicity.

Basic Info.

Model No:	SiHCI3	Quality	Electron Grade
Transport Package	Y-Cylinder, T-Drum, Tt, Tanker	Specification	20L, 40L, 280L and customizable
Trademark	CMC	Origin	Suzhou, China
HS Code	2812190091	Production Capacity	500ton/Month

Specification:

Trichlorosilane is a silicon precursor for epitaxial silicon-containing thin films, especially for the preparation of starting wafers.

Purity %:	≥99.85	
Resistivity:	≥ 300 ohm-cm	
Boron:	≤ 0.1 ppba silicon	
Total Carbon:	≤ 5 ppma	
Iron:	≤ 5 ppba	
Other Chlorosilane :	≤ 500 ppm	
Cylinder State @ 21.1°C :	Liquid	
Flammable Limits In Air :	7-83%	
Auto Ignition Temperature (°C):	182	
Molecular Weight (g/mol):	135.45	
Specific gravity (air =1):	4.67	
Critical Temperature (°C):	242.5	

Detailed Photo

Shanghai Kemike Chemical Co., Ltd is staffed by trained personnel, combine many years experience in Gas industry .We supply cylinder gas, electronic gas, etc., and the gas holder, panel, valves and fittings and other equipment, parts and engineering services to our customers in China and worldwide; The products are involved in various industrial fields, such as semiconductor chip, solar cell, LED, TFT-LCD, optical fiber, glass, laser, medicine, etc., Our mission is to partner with our global customers to provide support, solutions and quality products that are innovative, reliable, and safe.

Our products mainly include: H2, O2, N2, Ar, CO2, propane, acetylene, helium, laser mixed gas, SiH4, Sih2cl2, SiHCL3, SiCL4, NH3, CF4, NF3, SF6, HCL, N2O, doping mixed gas (TMB, PH3, B2H6) and other electronic gases.
