## Product Description

### Product Description

Trifluoromethane, also known as carbon trifluoride or Freon-23, is a chemical compound with the formula  $\text{CF}_3\text{H}$ . It is a colorless, odorless gas at room temperature and pressure. Trifluoromethane belongs to the family of haloalkanes, which are compounds containing one or more halogen atoms (in this case, fluorine) attached to carbon atoms.

Some key properties of trifluoromethane include:

Chemical Formula:  $\text{CF}_3\text{H}$

Molecular Weight: 70.01 g/mol

Boiling Point:  $-82.1^\circ\text{C}$  ( $-115.8^\circ\text{F}$ )

Melting Point:  $-160.0^\circ\text{C}$  ( $-256.0^\circ\text{F}$ )

Density: 3.56 g/L at  $25^\circ\text{C}$  ( $77^\circ\text{F}$ )

Solubility: Trifluoromethane is sparingly soluble in water.

Trifluoromethane has several industrial applications. It is commonly used as a refrigerant, particularly in low-temperature applications, due to its low boiling point. It has also been used as a propellant in aerosol products. However, it is important to note that trifluoromethane is a potent greenhouse gas with a high global warming potential, and its use as a refrigerant has been phased out or restricted due to environmental concerns.

Please note that the information provided here is based on general knowledge, and specific safety precautions and handling procedures should be followed when working with trifluoromethane or any other chemicals.
